NAME

ovs-parse-backtrace - parses ovs-appctl backtrace output

SYNOPSIS

ovs-appctl backtrace | ovs-parse-backtrace [binary]
ovs-parse-backtrace [binary] < backtrace</pre>

DESCRIPTION

In some configurations, many Open vSwitch daemons can produce a series of backtraces using the **ovs-appctl backtrace** command. Users can analyze these backtraces to figure out what the given Open vSwitch daemon may be spending most of its time doing. **ovs-parse-backtrace** makes this output easier to interpret.

The **ovs-appctl backtrace** output must be supplied on standard input. The binary that produced the output should be supplied as the sole non-option argument. For best results, the binary should have debug symbols

OPTIONS

- --help Prints a usage message and exits.
- --version Prints the version and exits.
